

AI generated vs Manual generated

● LLM generated ● Manually Generated

Unique User Count

51

Chi-square statistic: 4.87, p-value: 0.3005
The **p-value (0.3005)** is **greater than 0.05**, which means:

Fail to reject the null hypothesis.

A Chi-square test revealed no significant difference between the two conditions ($\chi^2 = 4.87, p = .30$), suggesting that the distribution of responses across categories was statistically similar for AI-generated and manually generated content.

Trust AI generated vs Manual

● LLM generated ● Manually Generated

Chi-square statistic: 9.49, p-value: 0.0500

The **p-value (0.0500)** is equal to 0.05,

A Chi-square test indicated a marginally significant difference between AI-generated and manually generated responses ($\chi^2 = 9.49$, $p = .050$), suggesting a potential effect that warrants further investigation.

Clarity: AI generated vs Manual

● LLM generated ● Manually Generated

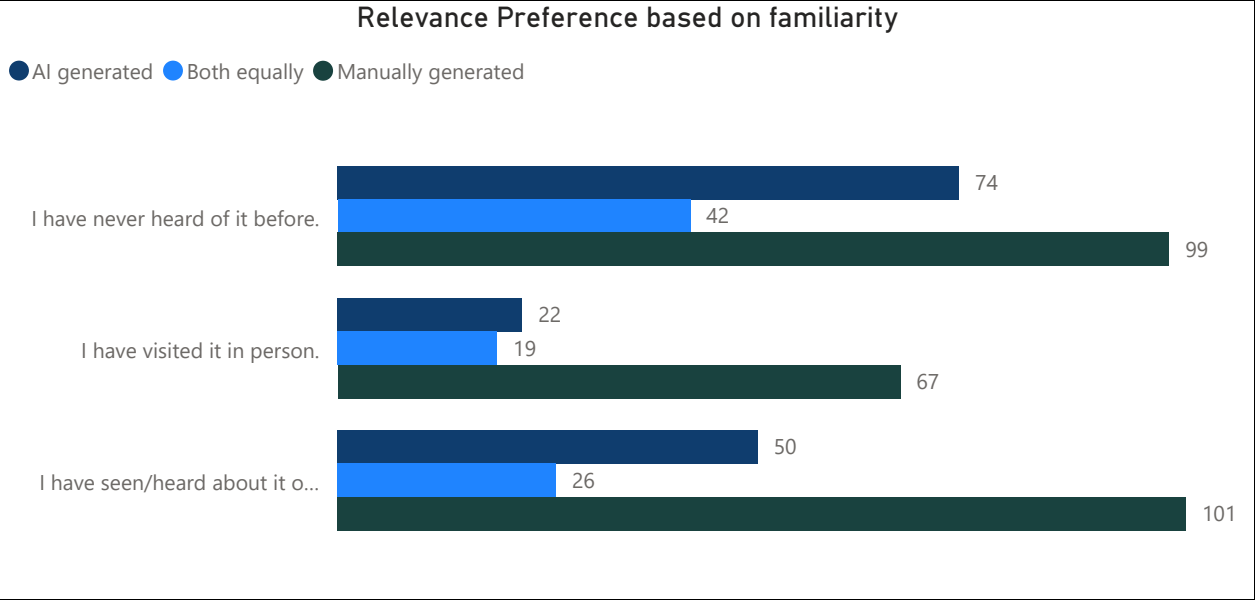

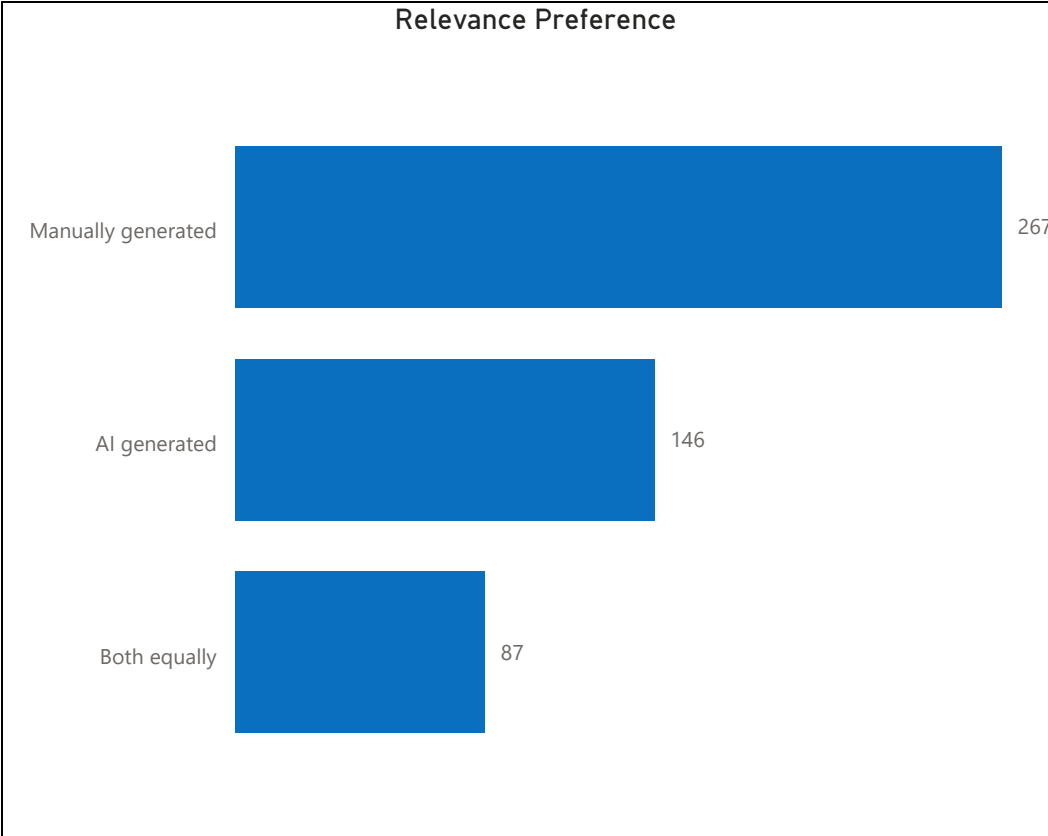

Chi-square statistic: 11.47, p-value: 0.0218

The **p-value (0.0218)** is **less than 0.05**,

So we **reject the null hypothesis**.

A Chi-square test indicated a significant difference between AI-generated and manually generated responses ($\chi^2 = 11.47$, $p = .0218$).

How would you rate your overall experience with the POI descriptions provided in this study?

3.94

What is your opinion on the idea of automatically adapting POI descriptions based on user interests?

3.73

How comfortable are you with reading AI-generated descriptions when planning visits to new places?

3.83
